EDUCATION

Georgia Institute of Technology, Atlanta, GA

August 2015 - Present

- Bachelor of Science in Computer Science - GPA: 4.00/4.00

Expected Graduation: May 2019

SKILLS

Languages: C, C++, Java, Python, Assembly, HTML, CSS, JavaScript, TypeScript

OS: Linux, Windows, macOS

Technology: Android, Git, Maven, Bash, Spring, Flask, Node.js, Electron, MongoDB, Solr, Firebase, Angular, Bootstrap

EXPERIENCE

Teaching Assistant - Georgia Institute of Technology

August 2016 – Present

- Data Structures and Algorithms, Design and Analysis of Algorithms**
 - Grades exams for class of over 250 students
 - Grades homework assignments, wrote unit tests for grading submissions - *Java, JUnit*
 - Holds weekly office hours, answering questions and helping students with classwork
 - Leads weekly recitations, covering material taught in the class
 - Designed practice assignments to help students prepare for exams
 - Built GUI based grading tool to automatically run tests on student submissions and perform static code analysis, flagging suspicious code - *TypeScript, Java, Electron, Angular*

Software Engineering Intern - Site Team - NCR Corporation

May 2017 – August 2017

- Developed site service with 6 other engineers in an agile development environment
- Implemented RESTful API endpoints for site service - *Java, Spring*
- Wrote code for testing, querying, saving data to Solr database - *Java, Spring, Solr*
- Wrote behavior driven tests to cover code functionality - *Java, Spring, Cucumber*

Software Engineering Intern - Yobi Technologies

June 2016 – August 2016

- Extreme weather prediction tool** - for use by central government in northeast India to issue flood warnings to residents - used in 4 states with combined populations of over 20 million
 - Implemented tool to map predictions from global climate models to flood prone locations and send SMS alerts to residents on a per location basis - *Flask, JavaScript, Python*
 - Wrote scripts to periodically update weather data in the database - *Python*
 - Built Android application with GPS integration to streamline installation of weather stations - *Java*

Undergraduate Researcher - Georgia Institute of Technology

January 2016 – May 2016

- Simulator to calculate power consumption of mobile device RAM**
 - Developed simulator to test memory management algorithm - *Python*
 - Implemented system to simulate memory with multiple sections - *Python*

PROJECTS

'Mapingo' - Location based order tracking application - Runner Up, HackEmory 2017

- Built Android application for submission of food orders and tracking of users using GPS - *Java*
- Created web interface for setting up points of sale, tracking orders and estimating time of arrival based on location and movement speed of users - *Angular, JavaScript*

'Edu-Bae' - Customized test generation algorithm - Third Place Winner, Georgia Tech Appathon 2016

- Implemented algorithm for custom generation of exams for individual students - *JavaScript*
- Built web interface for entering student data, creating questions, generating exams - *Angular, JavaScript*

'WingBuddy' - Home surveillance, automation system - Winner, HackEmory 2016

- Programmed Arduino to interpret sensor data, log room status to server and communicate with Android application over network - *C++*
- Programmed Raspberry Pi to automatically play music on speaker system based on sensor data - *Python*
- Built Android application to view live feed from sensors, connect with other users in network - *Java*
